

LIFE WAS BETTER WHEN TECHNOLOGY WAS MORE SIMPLE

Ashurov Tohir Nuriddin ugli

*Ostonov Shukhrat Egamovich Students of
Samarkand State University (Kattakurgan branch)*

Annotation: *How technology affects people, the negative and positive aspects, the problems that arise due to our technological conveniences are the focus.*

Key words: *technology, calculate, atmosphere, internet,*

Annotatsiya: *Asosiy e'tibor texnologiyaning odamlarga qanday ta'sir qilishi, salbiy va ijobiy tomonlari, texnologik qulayligimiz tufayli yuzaga keladigan muammolarga qaratilgan.*

Kalit so'zlar: *texnologiya, hisoblash, atmosfera, internet,*

Today, technology has become an integral part of people. Everything we do cannot be done without machinery. Different technologies bring benefits to our lives as well as harms. For example: the products coming out of the factories make our work easier in our daily life, but the poisonous air and various wastes coming out from them are not harming the earth and our atmosphere. In ancient times, when technology was not developed, people did their work by their own power. As a result, people were physically active and became healthy and prosperous. The environment was also healthy. Currently, the technologies that people create to make their work easier do not harm the environment and people themselves. Today, technology is making people's jobs easier but at the same time it is making people lazy.

For example, to calculate something, we immediately take a calculator in our hands, it makes our work easier and faster, but it limits the activity of our brain. The internet technology that we use a lot also creates a lot of convenience for us. We can instantly know what's happening on the other side of our face, chat with friends far away, but we can also use the internet for destructive ideas like theft and violence. These things are a big disaster for us humanity.

These things are a big disaster for us humanity. The development of technologies is dangerous for us on the one hand, but very useful on the other hand. For example: accounting makes book work and other human work easy and fast. It also increases people's reading and learning through various technological games. Of course, technology can secure you too. Experts say that burglary happens every 25.7 seconds. And even if almost all of us are quarantined in our homes due to the pandemic, the police still see as pike in burglary incidents in many cities, according to Hawaii Tribune Herald.

No one deserves to not feel safe even in their own home. Luckily, technology can also help make your home feel a lot safer. These days, there are countless devices that can keep an eye on both outside and inside of your home.

One of which are CCTV cameras that you can place outside your home to see who's lurking in your property without your permission. There are also surveillance cameras, which you can place in doors to keep track of your loved ones, especially when you're away. There are alarms that would sound off if someone breaks into your house too. Smart locks are also available that feature built-in cameras, intercom systems, and even an emergency siren.

Apart from the security, technology can also make everything convenient. Ahome's high-tech features can do even them ostmun dane task for you. With this, you won't have to exert much effort. This gives you more time to relax and enjoy the comfort of your home.

With the help of technology, you won't need are mote to control the lights.

Appendix:

internet - mass media

atmosphere - the earth's crust

technology - processing of materials and raw materials in a field of production.
