

help institutes in creating strategies for more efficient delivery of the lessons, ensuring an uninterrupted learning journey for the students.

INTRODUCTION

Nowadays the kinds of online courses are becoming more widespread. Opening a variety of online courses creates plenty of opportunities to achieve easier for good results in several aspects in once time. Unfortunately, it has disadvantages of digital learning. This essay will investigate the positive and negative sides of online courses and provide a logical conclusion.

The main advantages of available online courses are time saving and less in cost. Firstly, in the online classes, there is no commute included as a student can learn and get degree while sitting at the comfort of their home. In my mind, some students feel under the pressure when they are in the classroom. There are some kind of students, who do not have extra time to go offline course because of work or inconvenient time. Therefore, they would prefer to choose online one. Secondly, the market price is increased day by day in any fields. So that, one else the most important advantages of online learning is less in cost. For instance, the best part of digital learning is it is much more affordable compared old-fashioned learning. Moreover, parents are free to buy uniforms or spend travelling expenses and can save extra money. Due to this advantage of online education, economically weaker students can fulfill their dreams. you should pay for university credits and save a lot of money with digital classes. I am sure that online learning are much cheaper than offline one. Recently I have interested about costs of offline English courses and I come across more differences between online and offline courses' costs. These are on average from two hundred thousand sums till seven hundred thousand sums. therefore, the numbers and varieties of online courses are being grown in our modern society.

However, There are a few disadvantages of online courses. One major shortcoming of digital learning is lose concentration. Without having proper care for students while online classes by teachers they can easily lose focus on studies. Also, virtual classes can be done through phone or laptop gadgets where students can easily move to the games or videos of youtube for entertainment. This completely makes them go off from subject studies. I tend to think about face to face classes are more valuable to hold the students attention and concentration than virtual classes. Another danger by distance learning is health issues. Many parents are worried about their child's as it is unhealthy to sit for hours in front of a computer screen. Looking at the screen for too long can damage their eyesight. Moreover, this problem may cause negative effects for the future life.

Do you know when online courses were improved? One of the most oft-used terms after the pandemic is the term "new normal." The new normal in education is the increased use of online learning tools. The COVID-19 pandemic has triggered new ways of

learning. All around the world, educational institutions are looking toward online learning platforms to continue with the process of educating students. The new normal now is a transformed concept of education with online learning at the core of this transformation. Today, digital learning has emerged as a necessary resource for students and schools all over the world. For many educational institutes, this is an entirely new way of education that they have had to adopt. Online learning is now applicable not just to learn academics but it also extends to learning extracurricular activities for students as well. In recent months, the demand for online learning has risen significantly, and it will continue doing so in the future. As with most teaching methods, online learning also has its own set of positives and negatives. Decoding and understanding these positives and negatives will help institutes in creating strategies for more efficiently delivering the lessons, ensuring an uninterrupted learning journey for students.

Online learning offers teachers an efficient way to deliver lessons to students. Online learning has a number of tools such as videos, PDFs, podcasts, and teachers can use all these tools as part of their lesson plans. By extending the lesson plan beyond traditional textbooks to include online resources, teachers are able to become more efficient educators. It can be seen from the above analyses that, although online courses have certain disadvantages like health issues and lose concentration, correcting these disadvantages to positive sides is on the hand of that student which attended to the online courses. My personal opinion is that they should utilize properly any kind of gadgets in their life. In that time some advantage aspects may replace the disadvantage sides of online classes. Another advantage of online education is that it allows students to attend classes from any location of their choice. It also allows schools to reach out to a more extensive network of students, instead of being restricted by geographical boundaries. Additionally, online lectures can be recorded, archived, and shared for future reference. This allows students to access the learning material at a time of their comfort. Another advantage of online learning is reduced financial costs. Online education is far more affordable as compared to physical learning. This is because online learning eliminates the cost points of student transportation, student meals, and most importantly, real estate. Additionally, all the course or study materials are available online, thus creating a paperless learning environment which is more affordable, while also being beneficial to the environment. Every student has a different learning journey and a different learning style. Some students are visual learners, while some students prefer to learn through audio. Similarly, some students thrive in the classroom, and other students are solo learners who get distracted by large groups. The online learning system, with its range of options and resources, can be personalized in many ways. It is the best way to create a perfect learning environment suited to the needs of each student.

Despite being a vastly growing field of education, online learning has many disadvantages.

In some aspects, online learning seems superior to traditional learning because of its accessibility and ease of learning. It provides a fantastic way for people to learn in the comfort of their own place and at their own pace. Unfortunately, it falls short in various aspects. The critics of online learning would argue that it is simply not the same as a traditional classroom.

Therefore, in this article, we are going to look at the various disadvantages of online learning so that you can understand whether the drawbacks are worth it or not.

One of the main features of traditional learning is the instant feedback teachers give to their students. While in a conventional classroom environment, this feedback can come quickly, whereas, with e-learning, this possibility is limited. Students can come to their teacher with their problems and can get them resolved instantly during the lecture or the dedicated hours. Personalized feedback is essential for students as it positively impacts them. It also makes the learning process richer and boosts the morale of the students. One of the critical points of e-learning is that you can learn in the comfort of your home, but the lack of social interaction can lead to problems. For many people, school is their primary source of social interaction. In e-learning, educators and students spend most of their time online, which inevitably leads to social isolation. Social isolation, along with lack of physical interaction may lead to several mental health problems like increased stress levels and anxiety.

E-learning is a very effective learning mode, but it still lacks in some areas. Students attain theoretical knowledge at their convenience, but often their communication skills are neglected. This happens mainly due to a lack of face-to-face communication between students and teachers. Lack of development of communication skills would lead to students having the theoretical knowledge but not knowing how to impart this knowledge to others effectively.

Despite the disadvantages, the online study method proved to be beneficial in certain specific conditions. When it is not advisable to leave your home, or it isn't convenient for you, then in that case online study becomes a blessing in disguise.
