Annotation: *This article focuses on the reforms implemented in the education system and their results, issues of improving the effectiveness of spiritual and educational work in the education system. Today, the results of the reforms aimed at the development of the education sector, increasing the effectiveness of the reforms, and covering educational issues on a large scale will be highlighted.*

Key words: *education, society, reform, strategy, science, profession, politics, system.*

Since the first years of independence, the development of the education system in our country has been raised to the level of state policy. Conditions are being created for the effective organization of youth time, for our children to acquire modern knowledge and skills in conditions that meet global requirements. To ensure that they grow up as physically and spiritually mature people, to realize their abilities and talents and their intellectual potential. Great efforts are being made to develop feelings of loyalty and devotion to the motherland in the minds of young people. In the decree of the President of February 7, 2017 on the "Strategy of Actions" for the further development of the Republic of Uzbekistan, a number of tasks for the development of the social sphere, in particular, the spheres of education and science, were defined. The most important foundation of cultural and spiritual development is the education system. Because it is impossible to improve the society without training personnel who meet the requirements of the time, who have mastered the achievements of advanced science and technology. Today, fundamental improvement of the education sector has become the demand of the time. Based on this demand, laws regulating relations in the field of education are being adopted. In particular, the Law of the Republic of Uzbekistan "On Education" was adopted on September 23, 2020, and its purpose is to regulate relations in the field of education. Based on this law, the main principles, educational system, types and forms of education are clearly defined, the rules on distance education are defined in it, the necessary knowledge, skills and skills are acquired by students using information and communication technologies and the Internet global information network in accordance with the curricula and educational programs aimed at a distance. Also, according to the Law, state higher education, secondary specialized, professional educational institutions and their branches, as well as state-participated higher, secondary specialized, professional educational organizations and their branches are established by the decisions of the President or the Government. Establishment of non-state educational institutions was established by their founders[1]. By the decision of the Oliy Majlis of the Republic of Uzbekistan in

December 1996, October 1 was designated as "Teachers and Trainers' Day" and this day was declared a holiday. The national personnel training program was implemented on the basis of 3-stage reforms.

Phase I In 1997-2001, the necessary legal-regulatory, scientific-methodical, financial-material conditions were created for the implementation of the program. An additional 65 billion soums were spent by the state for this.

The II stage included the years 2001-2005, and the national program was introduced on a large scale.

III stage from 2005 to 2017. At this stage, the results achieved as a result of the national personnel training program, the accumulated experiences were summarized, and the education system in our country was improved on this basis. Since 2009, full 12-year compulsory education has been introduced in our country [2]. In 2017-2021, many programs were developed and put into practice in the education system. About seventy decisions, decrees and orders of the President of the Republic of Uzbekistan and the Cabinet of Ministers were adopted. This started developments in the field of education. Admission of students to the 10th grade in the secondary special system has been started. Extensive and comprehensive study of our cultural heritage and past values is necessary to reveal the deep historical roots, stages of formation and features of our current national spirituality. And this, in turn, will create national pride, respect for our history, the service of past generations, people's work, rational determination of the future, the formation of feelings of love for the Motherland, the correct development of our new society, the future rational determination serves to build a high democratic state[3]. The international community recognizes and acknowledges that our ancient and beautiful land is one of the cradles of not only Eastern, but also world civilization. From this blessed land, so many great people, scholars, politicians and generals have grown up, and the worldly and religious sciences, especially knowledge related to Islam, which have become an integral part of universal civilization and culture, have historically risen to the highest level. The incomparable merits of the great scientists who were born and matured in our country give us great pride[4]. Our young people should be brought up like their great ancestors who were ready to give their lives for their country, the feelings of love for the motherland should be reflected in the hearts of every young person. It is permissible to launch events on a large scale. It is permissible to pay special attention to the processes of education of each future generation. As we mentioned above, extensive work is being done in the field of education.

Conclusion: Today, great attention is being paid to the education system in our country. Among these are the activities that are being carried out to attract young people to the education system and organize their time in a meaningful way. Today, many spiritual and educational activities are organized in the field of education. Roundtable discussions with young people are also being held. The reason is that the processes of educating today's youth have become one of the daily issues not only of

the family, school, but of the whole scale. Now we live in a society where science is Our youth are in tune with the times. Many young people spend their time meaningfully using various idle networks. This, in turn, has a negative impact on the education of today's youth.

For this purpose, the organization of spiritual and educational events in the field of education is also carried out through these events. Issues of education are discussed. Mahmudhoja Behbudi's remark that "The world's buildings are the greatest schools inside" is very famous. School education plays an important role in child education. Here are the processes of organizing these events, I think that it is necessary to organize more in the school education system. The future generation will benefit from loving, protecting and inculcating the values of the motherland from a young age.
