Abstract: *This article discusses information about web technologies and their advantages in the lives of schools and school students. It analyses the challenges related to current technology and discusses ideas about creating a school website as a solution to address these issues, as well as its potential.*

Keywords: *web technology, technique-technology, website, capabilities, reader.*

The twenty-first century is the century of techniques and technologies. Our present day cannot be imagined without the Internet and technology. If you look at anyone, we can see them all carrying phones, laptops, wired and wireless headphones. We cannot imagine our lives without them. Nowadays, technologies cover all fields. We feel that technology has made many of our jobs easier and saved us valuable time.

Today, our schools are developing rapidly thanks to the initiatives of our respected President Shavkat Miramunovich Mirziyoyev. At the video selectors' meeting held on August 28, 2023, priorities for improving the quality of education, increasing the number of school places and supporting teachers were discussed.

The main solution of priority tasks will be solved by modern technologies and techniques.

Modern technologies can show their influence mainly through the use of web technologies for schoolchildren, their convenience and simplicity of interfaces.

One such technique is a proper website. We will create a strong bridge between teachers and parents, teachers and students by making this website easy and convenient for school and school library. Currently, many schools in Uzbekistan have developed such sites. However, as a result of the observations, their activity cannot be evaluated as high quality. To solve this problem, it is necessary to develop a suitable and multi-functional website for all schools.

Providing quality education to children is the most important factor in their development into a well-rounded person. As a result, parents will be able to know all the information about the schools that they believe are best for their children. For this purpose, they visit the school's websites and obtain detailed information about the organizational structure of this school, its level of education, methods of working with students, and teachers' knowledge levels, i.e. qualifications. In this regard, the school

website is very important, because it represents the first point of interaction between the school administration, teachers and parents.

Websites are distinguished from other programs by their convenience and simplicity. We know that computer literacy among the population is not high. This website is also distinguished by its easy-to-understand language. As a result, it does not create any difficulties for them and also increases the literacy level of the population. The school's website is a window to the school's management because it affects its overall performance and reputation. A website with relevant information plays a major role in increasing the number of admissions to an educational institution.

Having a good school web design is essential to provide students and parents with an unparalleled user experience. Other benefits of a website for schools include:

Ease of communication with students.

A website is necessary to provide relevant information to users. It also helps schools communicate with students and teachers. The schools website allows students to get relevant information about school events. They can also check their grades through the student's section of the school website. However, if students have some questions that they cannot answer verbally, they can contact the teacher through this website.

Strengthens communication with parents

Schools can use the Parents section of their website to contact parents and provide them with more information. Parents are in touch with the administration, general curriculum and activities of their children

Increases students' cognitive level

A school website improves students' knowledge level and allows them to study at their convenience. Students can access the website to access study materials at their convenience.

Updates and information sharing

The website allows the school administration to share relevant information about exams, results, events, admissions and many more.

Attract potential students

A uniquely designed website for schools has great potential to attract more potential students. Parents and students can view information from their dashboard.

With the increasing use of social media in daily life, schools are also using this platform to communicate with parents and students. However, social media is not the only way to reach more parents. This is a website that increases the credibility of the organization. That is, parents can be sure that by sending their children to this school, they can be sure that they will get the results they expect from their children in the future. Therefore, every school should invest in a school website to expand its reach and reach more parents and students.

Interests of school students, various news, such as the list of distinguished readers of the week, the most read columns of school students, various competitions on the topic "Who do I want to be?" If the event is encouraged with various prizes and the announcement of these events will be published on the site, we will contribute to increasing the love of readers. There are also many students in our schools with different personalities. There are school students who feel shy and hesitate to go to the school library and use it, and the school site that has the school library will be close to them and will help them increase their cognitive potential.

For creative schoolchildren at school and various competitions, separate pages should be organized, designed for their age.

The conclusion is that if we provide software that can improve the quality of education and attract a wide range of users today to our national education system on a large scale, we will increase the level of Internet literacy among schoolchildren and teach students how to effectively use technologies and techniques. As a result, we have made a step forward in developing our education system.
