

THE ROLE OF IMPROVING TEACHER'S CREATIVITY SKILLS

Ruziboyeva Mashhura

1st stage students of Uzbekistan State University of World Languages

Annotatsion: *The article explains how crucial is the development of creativity of future teachers in the context of higher education. Heuristic methods of organizing classes are analyzed and the expediency of their application in the process of professional training of future teachers is substantiated.*

Keywords: *creativity of future teachers, heuristic teaching methods, professional training, creativity, creative thinking, creative motivation*

In today's modern world, barely anyone interrogates the role of creativity. To a society that constantly needs to prosper and survive, creativity is an inevitable utensil. Tomorrow's professionals are required to be flexible, critical and creative thinkers rather than patterned ones. Manifestly, in this perspective, the concept of teaching is pivotal to the development of creativity. Nowadays, many students learn to solve particular sorts of problems: yet, are not adaptable enough to break out from patterns and confront unexpected situations which turns up momentarily in the present fast-changing world. As we all know, people are using new methods, technologies, ideas in many fields because new era demands this. Unfortunately, in the fields of education, we still rely on the old methods. In universities and schools education, students are required to memorize unnecessary information and tell them but this information is quickly forgotten, and the worst thing is when we are not able to use it effectively. After the exam, we blame youth and cause them to lose self-confidence.

Creativity includes logical thinking, creative approach to their profession, useful lesson activities, creative motivation by teachers to students. In the course of lessons, tutor should not test the memory of students, but should assess their activity based on creativity, the ability to analyze topics. Students should be more active in classes than teachers, they must prepare presentations and games in each lesson. Through this methods, the time of the learners may pass effectively and meaningfully. However we ignore students' activity and they get bored hearing it, cause lose interest to lesson. If we take history as an example, in this lessons teachers ask questions like when did something event happen? What happened in this year? Unfortunately, no matter how hard we try, this information will be removed from our memory. Instead of this teaching method, we should look for answers to some logical questions, for example why did this event happened? Who was responsible for this? What should he has done?

Being creative is essential for problem as it allows people to come up with new ideas and solutions when faced with difficulties or challenges. As an example, if somebody is stuck trying to solve a puzzle or work out an equation in maths class then their teacher might ask them: "How could we do this differently?" This encourages them not only think about different ways of doing things but also come up with new ideas altogether!

In conclusion, creativity is vital skill for learning and education. It can be difficult to identify and promote, but there are many ways that we can encourage creativity in students. It involves open-mindedness, willingness to experiment with new ideas and methods. This will increase the number of students who are eager to learn.
