**Anotation:** *this article talks about educating our youth in the spirit of military patriotism, increasing their love for the motherland, protecting young people from ideological influence, courage, courage, love for the motherland, and the negative effects of mass culture on young people.*

**Keywords:** *bravery, military patriotism, pedagogical process, protection of the motherland, mass culture.*

It is our duty to come to the present globalization arc and educate our youth in the spirit of military patriotism and bring them up loyal to the motherland. Let's consider general issues regarding the practical use of priority forms of education of young people in the spirit of military patriotism. The "concept of educating young people in the spirit of militarism" lists the methods of educating young people in the spirit of militarism as: persuasion; exercise and work independently; observation; encouragement; role model and personal example. Accordingly, the relevant instructions are prescribed. Paragraph 13 of the concept on the priority forms of education of young people in the spirit of military patriotism States: "the education of young people in the spirit of military patriotism is organized in various forms, including scientific and practical conferences, question and answer evenings, reading, Games, meetings with famous people and other forms.

The main foundations and material technical base for raising our youth in the spirit of military patriotism, increasing the spirit of loyalty to the motherland are being created. One of the urgent tasks is to increase and activate the effectiveness of work on the education of young people in the spirit of military patriotism, to more actively involve citizens of 84 countries, State and non-governmental organizations and other institutions of civil society, and to instill in the minds of young people feelings of patriotism, courage, courage and love of the motherland. As a result, the pedagogical-psychological possibilities of educating young people in the spirit of military patriotism justify the need to improve the system of education in the spirit of military patriotism. National experience in the philosophical, methodological, methodological, psychological and pedagogical approaches and the education of students of the military educational direction in the spirit of military patriotism up to the call, based on the organization of educational activities of our republic and foreign scientists, as well as group and section

commanders; consistent with research tasks, it is determined by the application of mutually complementary research methods, the quantitative, as well as qualitative provision of the analysis and research description, the representativeness of experimental and test work, and the processing of the results obtained using mathematical-statistical methods of analysis. In addition, meetings with military personnel and veterans with rich life experience, individuals who have won various competitions and competitions in the fields of science, culture and sports. It has become a tradition to hold such meetings in connection with events in the appropriate direction, holidays, large dates, etc. It is necessary to carefully and comprehensively prepare for these meetings, prepare the necessary favorable conditions and the participants of the event, plan to conduct the event, meet the invited guests, start, Thank you, observe and carry out procedures in full. Running the "exemplary military family "Review competition, The" Dad, Mom and I are athletes " competitions will also serve these purposes.

Patriotism is the greatest duty of a person as a citizen and a member of a particular society and concentrates such qualities as loyalty to the family, confidence in the future, respect for history, attention to today, consideration of the interests of people around him, the ability to distinguish the right from the wrong. As long as the desired Army, the sense of patriotism in society, is immature, it will not be of use even when the most modern weapon is given at its disposal. Therefore, in the defense of the motherland, first of all, the human factor is the leader. President of our republic Sh. In one of his speeches, Mirziyoyev emphasized that spiritual education is an extremely important, delicate and decisive issue and put on the agenda the tasks of developing a new system of maturing patriotic qualities in them in the educational process carried out with today's youth. The head of the country summarized historical traditions and experiences of foreign countries in this process and made recommendations on the basis of modern science, such as the formation of patriotic organizations of children and adolescents in our country. It was noted that it is a big mistake to allow paperwork, superficiality and lethargy in the participation of young people in activities related to military life, physicality, therefore, the development of new pedagogical technologies for educating student-young people in the spirit of military-patriotism and the development of a new methodology for patriotic education have become the main goal of today's scientific research. Also, In the field of education of the Republic of Uzbekistan, the achievement of the full-fledged implementation of the tasks set out in the law "on education" and the "National Program for training" will also be an important factor in the formation of patriotic qualities and the nature of self-sacrifice in young people. By making it necessary for military patriotism to have from a person the qualities of patience, endurance, perseverance, perseverance, courage and valor, he essentially brings a person from everyday petty worries to glory. That is, a person goes through military patriotism from selfish love of the motherland, to the realization of his moral duty to

the motherland, grows up. The importance of patriotic education for students is also determined by the need to strengthen the security of our country, defense capacity, ensure the safety of citizens. For this reason, educating students in the spirit of patriotism remains a glorious, responsible task facing the affairs of Education. One of the main tasks of our independent state today is to educate my country, a patriotic perfect person who lives burning and burning as glue. In the pedagogical process, students can be taught patriotism, Patriotism of historical figures, heroism before the motherland, develop qualities of courage and courage by psychological influence in order for the feeling of love for the motherland to become a true faith, a true creed. For example, Sheikh Najmiddin Kubro himself is the head, forming an army from the people and inspiring The Citizen of Urganch to fight against the enemy. In battle, Beomon holds the Sheikh by hand with the flag raised high until his last breath. The enemies were forced to cut the Sheikh's fingers one by one to get the flag.

Military patriotic education will consist in the formation in a person of a high defense consciousness, systematic, goal-oriented skills and qualifications for the formation of ideological-political, spiritual-psychological and moral qualities necessary for the armed protection of the motherland. The importance of pedagogical-psychological training in the development of patriotism in students is considered very high. It is necessary to pay attention to the fact that the upbringing of military patriotism in society depends not only on pedagogical-psychological foundations, but also on social, economic, political, moral ones. Obviously, activities to strengthen military-patriotic work among young people today are aimed at expanding local, territorial features, as well as the forces and means used more than before. At the stage of new development of Uzbekistan, similar approaches and relationships are being formed in the spiritual sphere as in all spheres. After all, the work done in this area, the problems that need research, have been gathering for many years. One such urgent task is patriotic education. The work carried out with the aim of protecting young people from various harmful religious currents, from the influence of destructive and alien ideas entering under the guise of "mass culture", returning stray citizens to a healthy lifestyle, does not give the results we expect. That is why we must teach that patriotic education is important in the formation of youth spirituality, that its formation and improvement is a process that lasts from the birth of a person to the end of his life. Teaching young people to feel duty and responsibility to the motherland and the nation is to make decisions about the qualities of compliance with the law.
