3rd grade student of Mathematics and Informatics*

**Nasirova Shaira Narmuradovna**

*Navoi State Pedagogical Institute, professor of the Department of Informatics*

**Annotatsiya.** *Ushbu maqolada o'quv jarayonida innovatsion texnologiyalardan samarali foydalanishning ahamiyati to'g'risidagi ma'lumotlar yoritilgan. O'qitish usullarida innovatsion texnologiyalardan samarali foydalanishning afzalliklari ko'rsatilgan. Innovatsiyalar keng kirib kelgan, ilm-fan rivojlangan jamiyatda yuksak iqtidor sohiblarini kamol toptirish hamisha xalqning turmush tarzini yaxshilab, uning porloq kelajagiga xizmat qilgan.*

**Kalit so'zlar:** *innovatsion, raqamli, texnologiyal, jarayon, o'quv, ta'lim, tizim, uzluksiz*

**Аннотация.** *В данной статье представлена информация о важности эффективного использования инновационных технологий в образовательном процессе. Показаны преимущества эффективного использования инновационных технологий в методике обучения. В обществе, где широко распространены инновации и развита наука, развитие высокоталантливых людей всегда улучшало образ жизни людей и служило их светлому будущему.*

**Ключевые слова:** *инновационный, цифровой, технологический, процесс, обучение, образование, система, непрерывный.*

**Annotation.** *This article provides information on the importance of effective use of innovative technologies in the educational process. Advantages of effective use of innovative technologies in teaching methods are shown. In a society where innovations are widespread and science is developed, the development of highly talented people has always improved the people's lifestyle and served its bright future.*

**Key words:** *innovative, digital, technological, process, training, education, system, continuous*

Determining the priorities of the systematic reform of higher education in the Republic of Uzbekistan, bringing the process of training of highly qualified personnel with modern knowledge and high spiritual and moral qualities to a new level in terms of quality, modernization of higher education, to develop public-private partnerships in the field of higher education in order to develop economic networks and social sectors based on advanced educational technologies, to increase the level of coverage with higher education from 50 percent based on the organization of activities of state and non-state higher education institutions in the regions, creating a healthy competitive environment in the industry is one of the priority issues.

One of the modern demands placed on the continuous education system in the process of reforms in the field of education is the effective use of innovative technologies in the educational process and the improvement of the quality and efficiency of education. Today, old traditional style lessons do not meet the needs of our youth, they get bored listening to such lessons and their activity in the lesson is not enough. Based on the conditions of innovative education, it is necessary to educate them based on an innovative pedagogical approach. Based on this, let's talk about the word innovation.

Innovation is a new or significantly improved product, service or process. The term "innovation" comes from the Latin word "novatio" which means "renewal" (or "change"). In this case, the prefix "in" is translated from Latin as "in the direction", if it is translated literally, it can be understood as "Innovation" - "towards a change". The concept of "innovation" is "newness", "discovery"., are synonymous with the words "invention", and although they differ in meaning, in any case, all these concepts are related to the result - creative activity, creativity. At the same time, according to experts, if creativity is a new if it refers to the promotion of ideas, then the hallmark of innovation is its practical implementation.

In this process, learners embody such situations as gathering, storing, transferring knowledge, creating their logical structure, and effectively using them in organizing their professional activities in the future. The main focus of the teacher in training sessions is on teaching students to think independently, strengthening the acquired knowledge and developing the skills of how to apply them in practice. Therefore, it is necessary for students to be directly involved in acquiring knowledge, skills and abilities. The solution to this problem is related to the use of innovative management-based technology.

Innovative technologies are innovations and changes in the activities of teachers and students in the pedagogical process, and in its implementation, mainly interactive methods are fully used. Innovative education is a process of preparing future specialists for work in the field, which consists in improving education based on previously acquired knowledge and making an effective new approach. It is aimed at achieving a new quality indicator in education and training, achieving high efficiency and focus on creativity, as well as raising educational technologies to a new level of quality, and organizing modern approaches to education and training.

Wider coverage of young people with science, supporting the young generation who can analyze science-related issues with their own world views, independent thinking and unconventional creative analysis, combining theory with practice education in the process, it is necessary to form the creative and research abilities of students.

If the teacher is inquisitive, creative, well-versed in his subject, and through this subject he gives knowledge to students based on innovative ideas based on the requirements of today's times, this will be the reason for that teacher to gain the attention of students and parents. he did. On the basis of the above-mentioned ideas, it is possible to increase their interest in learning and profession by instilling a lot of information to students in all classes. For this, it is necessary to teach students more concepts about modern techniques and

technologies related to science. The more skillful a teacher is, the more he will be proud of the achievements of his students in the future.

In short, innovative technology is the provision of new knowledge to students using scientific research, creation of developments, experiment-testing or other scientific and technical achievements.
