

## IMPORTANCE OF RECOGNIZING STUDENTS' LEARNING STYLES

**Murodova Fazilat Muxtor qizi**

*3rd year students at Djizzakh branch of The National  
University of Uzbekistan named after Mirzo Ulugbek*

*Supervisor: Kuvandikova Dildora Ali qizi*

*Assistant teacher in the department Foreign Languages at Djizzakh  
branch of The National University of Uzbekistan named after Mirzo Ulugbek*

**Annotation:** *Importance of recognizing students' learning style is widely covered in this article. In this article, I have given brief information about the useful methods of teaching children.*

**Key Words:** *Visual, Audio, Tactile Learning; Dale Cone; Active Learning*

### INTRODUCTION

Every year in our country, several areas of science are selected and developed with special attention. This year, physics and foreign languages have been identified as such priority areas. Uzbekistan's policy of openness, active entry into the world market, expanding international cooperation in all areas increase the need for knowledge of foreign languages. Today, 25 higher education institutions in the country teach in foreign languages. In 2016, they were only 7. The number of graduates who have received an international language certificate has increased 10 times in the last 3 years. "Every graduate must be fluent in at least 2 foreign languages" – Shavkat Mirziyoyev "Since we have set ourselves the goal of building a competitive state, from now on school, high school, college and university graduates must be fluent in at least 2 foreign languages. This strict requirement should become the main criterion of the activity of the head of each educational institution," Shavkat Mirziyoyev said Every language need new words – derived, derived, or otherwise – as a result of new innovations and developments, simply because new things necessitate new terms. Language, the instrument we use to communicate, is always changing and evolving throughout the human world. We must label new technologies and developments when they enter our lives, and we must, of course, speak about them. Language is dynamic, and it changes all the time. Native speakers, for example, like playing in their own language because there is no "bad" The arms. The most important thing is to utilize it: if a new word is used by multilingual speakers, it will most likely survive and eventually become a common word that will be included in our dictionary.

### WHAT ARE LEARNING STYLES?

Studying Methods for Career Development various instructional techniques When determining how to acquire skills and grasp material the most effectively, many different learning styles must be taken into account. Here are a few illustrations of the most well-

liked learning styles that researchers and teachers have proposed for this idea: Oral Verbal, also known as linguistic, learners frequently favour utilizing words to process information in both speaking and writing. These students frequently possess excellent communication skills, strong self-expression, and reading and writing prowess. Oral learners frequently favour written or spoken learning resources. Related: Adapting to different learning styles Spatial-visual The type of learner who prefers to process information through observation is the spatial-visual learner. These students often learn best when provided with visual clues or aids, such as drawings, diagrams, graphs, and charts. In general, learning techniques that encourage creativity and use symbols to express information are preferred by spatial-visual learners. Associated: Visual Learning Aid Hearing Hearing vs. Listening: Most students prefer to listen to digest information. These students frequently learn best by actively participating in discussions about subjects aloud. It is typical for vocal learners to favour instructional strategies that encourage them to elaborate on, describe, dispute, repeat, or pose questions about concepts to gain knowledge. Kinesthetic learners are those who learn best through physical movement. These children frequently like hands-on, tactile learning resources that let them engage with tools or other elements. Moving settings might be ideal for kinesthetic learners. Continue reading: 11 Kinesthetic Learning Techniques for Professional Advancement Social Those who learn best by processing information and cooperating in a group setting are social or interpersonal learners. This learning type typically takes a back seat to others like verbal, auditory, logical, or auditory learning styles, allowing for easier engagement through these techniques. Socially inclined individuals might favour collaborative work, group discussions, and peer problem-solving. Learn more about Social Learning Theory by reading the following article. Alone Independent study techniques are typically preferred by lone or independent learners. This learning type is secondary to other learning styles, much like social learning. Thus, solitary learners can flourish in an atmosphere with lots of room and silence so they can work through activities, concepts, and difficulties on their own. They could choose independent research and maintain a study journal. Related: 14 Strategies for Successful Self-Study (Plus the Benefits)

### **WHAT MAKES LEARNING STYLES CRUCIAL?**

Learning styles are significant because they enable many people, including students, teachers, professionals, and learning and development specialists, better comprehend particular techniques that aid pupils in properly processing knowledge. Will be beneficial. An overview of how the idea of learning styles influences Students: By being aware of their preferred learning styles, students can tailor their methods for doing their homework and studying. To achieve, . kids might also ask their teachers for accommodations. Teachers: By being aware of the variety of learning styles present in the classroom, teachers can better differentiate their lessons to fit each student's specific needs. Professionals: Knowing how people process information most efficiently can be helpful for professionals in any career that necessitates ongoing learning, development, and improvement. Experts in learning

and development: Learning and development specialists can provide instructional differentiation to professionals to promote learning, just like teachers who are aware of the principles of teaching styles can.

### **HOW TO DETERMINE YOUR LEARNING STYLE**

There are various methods for evaluating your capacity for learning and choosing the learning style that best meets your requirements. Here are some ideas to think about while determining your particular learning style:

Evaluation. You may find a variety of online tests that will help you identify your learning style using the principles of different theories. Try out several teaching techniques. To identify the method that best meets your needs, you might find it helpful to experiment with learning the same topic in several methods. Consider your academic background. You can examine your prior knowledge. You might reflect on your prior educational experiences and consider the learning strategies that have been most effective for you. Inquire about the opinions of your boss or teacher. You can ask a teacher or supervisor who can provide you with insight into your information processing abilities for input on your learning style if you're a student or professional.

### **STUDY DESIGN AND INSTRUMENTATION**

Designing learning and teaching is a crucial first stage of analyzing learner characteristics. It specifically aids in choosing and implementing relevant teaching strategies and creating appropriate instructional materials. These qualities include things like a student's history, preferred learning methods, and learning preferences.

Every student succeeds in their studies because each learner has unique qualities, and education (learning and teaching) may be tailored to fit these features. In other words, understanding a student's preferred method of learning improves instruction and makes material more applicable to the particular learner. A learner's behavior in relation to how they take in and process information is known as their learning style.

Several learning styles have been identified in academic literature. Visual, auditory, and kinesthetic (VAK) learning styles are frequently employed to categorize students as either visual, aural, or kinesthetic learners.

One of Uzbekistan's premier private institutes of higher learning hasn't given this issue much thought.

Recognizes the significance of teaching methods as a component in enhancing students' learning experiences. Most educators conduct courses in the conventional, passive manner. Nonetheless, the university is now promoting the shift from academic learning to activism learning. This necessitates greater individualized instruction.

The goal of this study is to examine UzMU students' different learning preferences and identify if they are primarily visual, auditory, or kinesthetic learners. This study makes

recommendations for enhancing teaching and learning at the University and analyzes relevant elements (handiness, gender, and learning streams) and their impact.

Many studies on child education and the most effective teaching techniques are currently being done by scientists, but I don't believe that a clear solution to this issue has yet been discovered. About the capacity for persuasion.

One of the top private universities in Uzbekistan, UZBEKISTAN NATIONAL UNIVERSITY (UzMU), hasn't drawn much notice.

Emphasized the significance of learning style as a component in enhancing students' learning experiences. Most teachers deliver courses in the conventional passive manner. Today, however, the institution is supporting the switch to active learning. This necessitates greater individualized instruction.

#### Design and tools for the study

The study looks at how NUU students learn (including their visual, auditory, and also using the VAK Learning Styles Assessment, I identified my kinesthetic/tactile learning type. 287 students from PEDAGOGICAL UNIVERSITY participated in the study; at a convenient time, 75% of the participants were women and 25% were men (random or random sampling). Participants Each scenario included three possible solutions, and they were asked to choose the best one after reading 24 brief situations.

#### CONCLUSION

In conclusion, the significance of understanding learning styles is to effectively learn how an individual understands new information so that they can determine the most effective way to collect, interpret, and present information. I have concluded that improper learning style assessments harm kids and the schools they attend after examining teaching styles and the need for learning types in education. Understanding what exams are necessary to evaluate students' readiness to learn will not only assist students to learn better but also help teachers plan their lessons. Although visual, auditory, and kinesthetic learning styles are the most frequently mentioned, numerous other theories of learning styles can be compared to these learning styles. Students will perform better both inside and outside of the classroom if learning style assessments are used more effectively in educational settings. Whilst the additional study is required, the initial investigation into learning preferences has led to.
